- B2B y B2C applications

OUR WORK

Technology is not a sales must: advice is the other needed for the development of any IT strategy based on our clients targets. This accurate strategy will help you to prevail over your competitors.

We analyze and document your business requirements in such a way that it facilitates the solutions design. We choose the tools and technologies that solve today's problems, and anticipate tomorrow needs. We establish processes of development adapted that emphasize in the documentation and the testing, not a very used practice in today's industry. We centre the design efforts on the user's needs.

e-labs | solutions

ENGENUS LABS

Research and development are key components in industry. We are constantly improving and updating our working techniques / practices by the investment on human resources. Engenus makes thus, allowing us to get to know the latest IT news.

The different professionals in Engenus - in charge of research, and prototype solutions - join their efforts and thus show their capacity for development. These prototypes are just samples of what Engenus specializes in.

Check our web site at <http://www.engenus.net>

CUSTOM SOLUTIONS

We have in our technology platforms tools like customer relationship management, financial tools (ORACLE, SAP, etc) and many others that can make possible the migration to web applications.

Our clients can customize every business need they have thru our software with high levels of security at every level. With this, it's possible to develop with no borders nor boundaries pretty much every idea in order to improve efficiency.

BUSINESS SOLUTIONS

Engenus provides custom software development services. We specialize in Web Applications and Distributed Systems.

CONSULTING

Let us help you improve your business. Our great experience developing IT solutions enable us to upgrade your performance without increasing your costs. Our background in outsourcing projects combined with our highly qualified team of experts allows us to effectively comply with our clients requirements keeping up with the most competitive deadlines and costs. We are able to advise you on:

- How to identify your needs;
- How to come up with a solution;
- How to choose the suitable technology;
- How to develop a prototype solution.

web applications

WEB APPLICATIONS

This kind of software is what defines our expertise. We offer a full service technology, from web designs to maintenance and man powering thru the entire development process. Our service includes sophisticated applications easy to use according to the latest and most advance tools which combines images, videos and dynamic contents.

prototypes

PROTOTYPES

It is easier to figure out your needs when you know how the ultimate product will be like. By quickly developing a prototype, we can offer you a preliminary view of the final solution. This will give you a clear a idea of what you are getting and it will give us the chance to find out new requirements. In this way, we find a quick, simple and suitable solution for your business.

Our prototype solutions will show you a great variety of solutions. Once you are presented with the available demos, you will be able to either suggest modifications to one of them or mix and match parts of different solutions.

Application Fields:

- Image processing, Distributed Services, Back Office, Audio & Video Streaming

SUCCESS CASES
